Art Unit: 2622

1. All pending claims 1-7 are allowed. Claim 1 is independent.

2. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable over the prior art of record because the prior art does not teach a guiding mechanism having the claimed sleeve connected to the scanning module and movably installed on the guide shaft along which the scanning module is driven to move, the sleeve comprising an inner side and at least two protrusions protruding over the inner side that are respectively positioned on two opposite sides of a line of gravity of the sleeve, the sleeve contacting the guide shaft along the protrusions, the scanning module being supported by the guide shaft via the at least two protrusions of the sleeve.

The prior art reference Lee (U.S. Patent No. 6,888,651), cited below, discloses a guide rod for guiding reciprocating movement of a sensor rack, the sensor rack having a guide frame disposed at the bottom side thereof in contact with the guide rack, the guide frame having a double bevel bottom sidewall formed of two bevel surfaces, which are respectively disposed in contact with the guide rod. However, the two bevel surfaces of the guide frame bottom sidewall do not read on the claimed two protrusions of the inner side of the sleeve.

Claims 2-7 depend on claim 1 and thus are allowable for the reason given for claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Batten (U.S. Patent No. 6,771,399) discloses an injection-molded plastic positioning system for moving carriage in a flatbed scanner.

Tsai (U.S. Patent No. 5,999,277) discloses an image information reading apparatus having rolling elements interposed between a sheet table and a contact type sensor.

Fujiwara (U.S. Patent No. 5,691,825) discloses an optical image scanner having bearings for guiding one side of each of two carriers along a guide shaft.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cheukfan Lee whose telephone number is (571) 272-7407. The examiner can normally be reached on 9:30 a.m. to 6:00 p.m., Mon-Fri.
